

Code can be found here: https://github.com/Thug-Lyfe/test_ass_4/releases/tag/1.0

Made a release so the time could be verified.

the tests being run

sample of test data:

```
marco#;blum#;black#;32
philip#;kebab#;brown#;21
kasper#;kebab#;black#;36
philip#;borum#;white#;30
```

more can be found in the data.txt file.

This is an example of one of the data driven tests.

```
@Override
public ArrayList<person> getOldestPeople(ArrayList<person> people) {
    ArrayList<person> oldest = new ArrayList();
    int currentAge = 0;
    for (int i = 0; i < people.size(); i++) {
        person cp = people.get(i);
        if (cp.getAge() > currentAge) {
            oldest = new ArrayList<person>();
            oldest.add(people.get(i));
            currentAge = cp.getAge();
        } else if (cp.getAge() == currentAge) {
            oldest.add(people.get(i));
        }
    }
    return oldest;
}
```

There are in total 5 data driven tests in the project, the rest are logical or math problems.
